1. Overview

EuroGlyph enables easy typing of the Euro glyph from the most important Eurofonts without switching fonts. EuroGlyph supports the free Adobe Eurofonts and the Linotype Eurofonts.

2. Installation

For installation of the EuroGlyph XTensions™ software you have to copy “EuroGlyph.xnt” to the XTensions™-folder of QuarkXPress™. After restarting QuarkXPress™ EuroGlyph is ready for use.

3. System requirements

- MacOS 10.3.9/10.4
- Windows 2000/XP
- QuarkXPress™ 6.5/7

4. Usage

After entering the key combination Alt-E (MacOS) or AltGr-E (Windows) EuroGlyph looks for the Euro glyph in the current font. If the glyph is found either in the font itself or in one of the installed Linotype Eurofonts it is inserted. Otherwise the following dialog pops up:

Picture 1: Assign Font, Char and Scale

With this dialog you can assign a Euro glyph to the current font. The chosen glyph is recorded and added without the dialog in the future. In addition it is possible to define the char inserted from the chosen font and a scale factor to adjust the size of the Euro glyph.

It is possible to change this assignment. Simple press the Ctrl (MacOS) or Shift (Windows) - key along with Alt-E. Then the dialog pops up, independant whether a Euro glyph has already been assigned or not.

5. Other Eurofonts

It is possible to define custom Eurofonts, which are available from the popup menu from Picture 1. You have to add the following section to the file "EuroGlyph.ini" within the XTension folder.

```
[Eurofonts]
Eurofont1=Some Eurofont
Eurofont2=Another Eurofont
```
