1. Overview

The current fonts of the most font companies contain the Euro glyph. To distinguish them from older versions without the Euro glyph the menu and postscript name had to be changed. After replacing the older versions against the new ones, there is a problem with all existing documents. After opening them there is a warning about missing fonts. Although it is possible to replace the fonts with the built in dialog of QuarkXPress™, this is very time consuming.

FontMapper solves this problem. It is possible, to replace all missing fonts with one click. At the moment there is built in support for the complete Linotype font library. In addition, it is possible to add any number of other fonts to the replacement list.

2. Installation

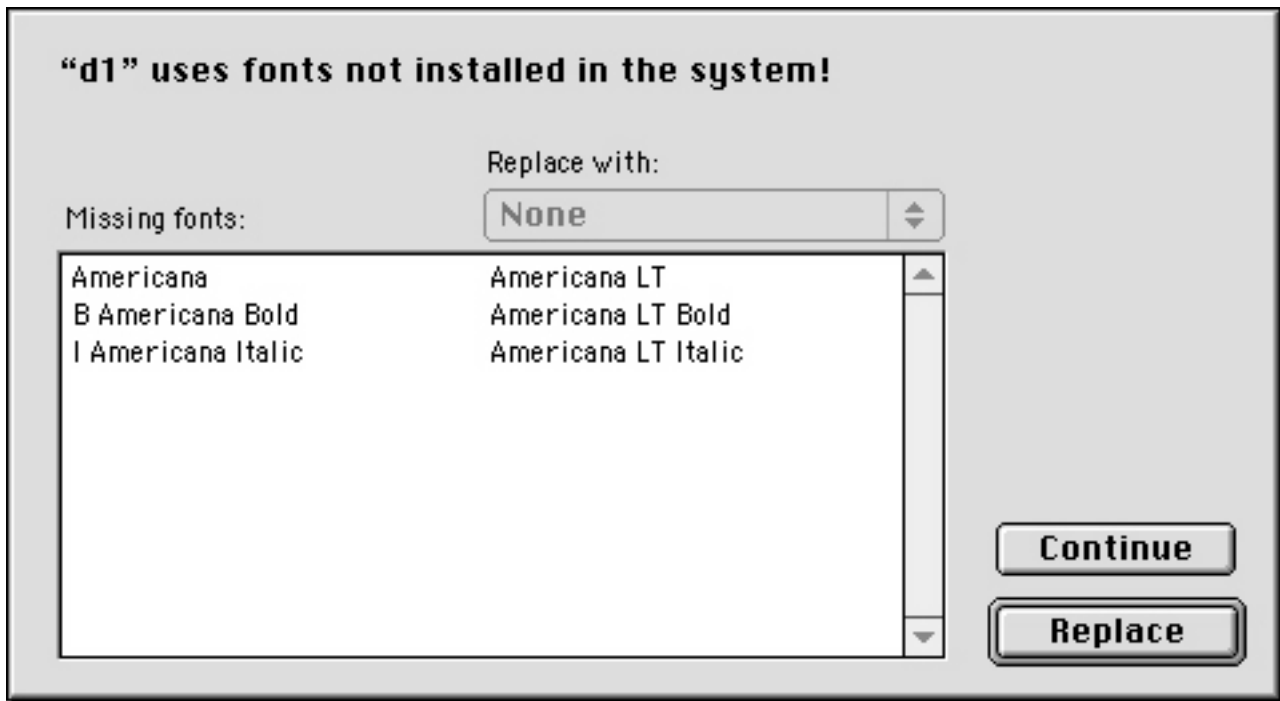

FontMapper is installed by copying it into the XTensions™-folder of QuarkXPress™. After restarting QuarkXPress™ FontMapper is ready to use.

3. Requirements

- MacOS 9.2 and MacOS X 10.3.9/10.4
- QuarkXPress™ 4.1 to 6.5

4. Font Replacement

After opening a document the FontMapper checks the document for missing fonts. If it finds some, the following dialog is shown:

On the left side of the listbox you can see all missing fonts, on the right side you see the replacements, if found. After pressing „Replace“ all missing fonts are replaced according to the replacement list. Clicking on „Continue“ opens the document without any change. The replacement can be done later from the menu „Utilities->Replace fonts...“.

It is also possible to specify the replacement font for each missing font by hand. After selecting the according font, the replace popup menu is activated and you can choose a replacement font from all active fonts.

5. Custom replacement

With the file „FontMapper.ini“ in the XTensions-folder it is possible to add fonts for automatic replacement. In the section [FontMap] the menu names of the old and new font have to be added, one line for each font. Here an example:

```
[FontMap]
Amreicana=Americana LT
B Americana Bold=Americana LT Bold
...
```
