1. Overview

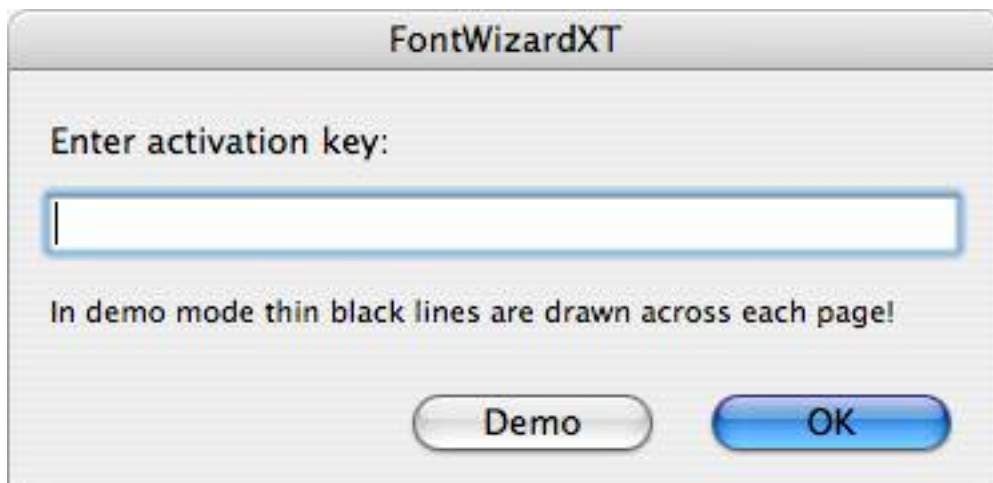

FontWizardXT 5.5 is XTensions software for QuarkXPress 7/8 and let the user save multiple pages as EPS files in one step. There are several options for naming the resulting eps files and for the folder the files are saved in. FontWizardXT is fully integrated in the new eps output style scheme of QuarkXPress.

2. System requirements

- MacOS X 10.4/10.5
- Windows 2000/XP
- QuarkXPress™ 7/8

3. Installation

The file “FontWizardXT.xnt” has to be copied into the folder “XTensions” of QuarkXPress™. After restarting QuarkXPress™ the following dialog appears:

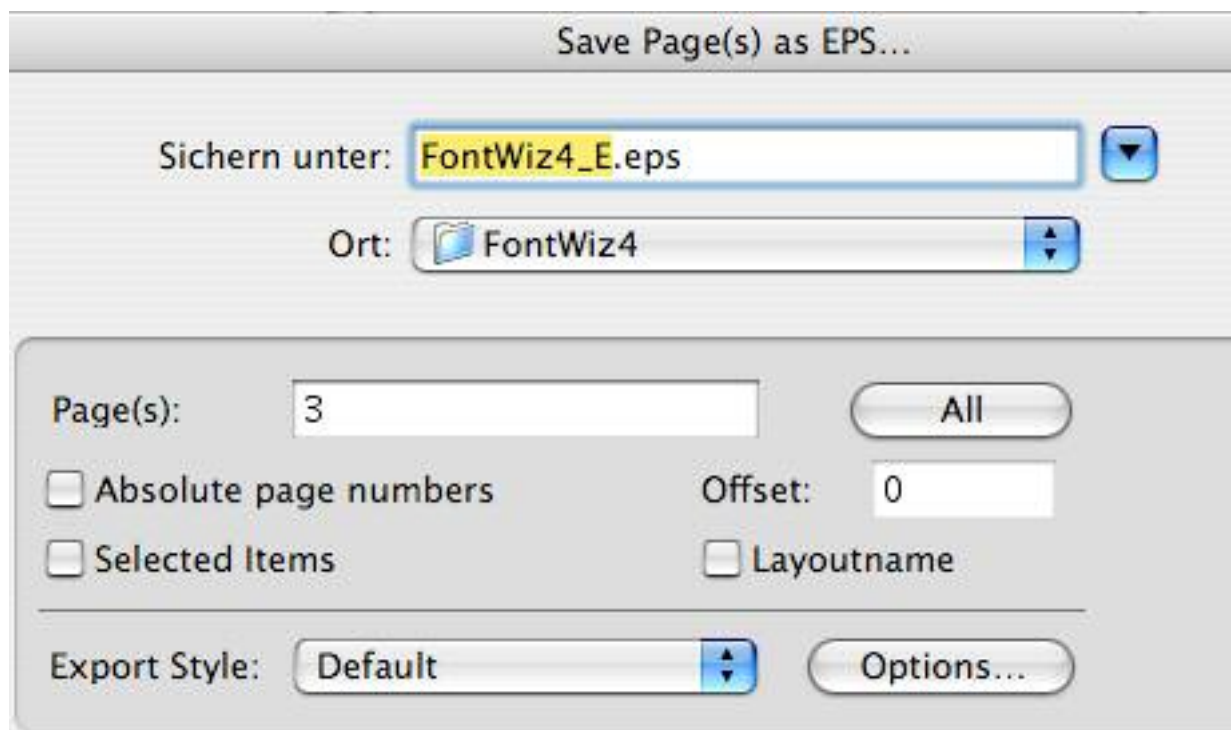

After entering the activation key FontWizardXT is ready to use. Otherwise you can run FontWizardXT in demo mode. In demo mode all functions are available, but thin black lines are drawn across each page of the created eps files.

4. FontWizardXT EPS Export...

FontWizardXT adds a menu item “FontWizardXT EPS Export...” to the QuarkXPress™ menu “Utilities”. There is also a keyboard shortcut Ctrl-E for activating that menu item. On Windows no frame must be selected for the shortcut to work.

4.1 Save Page(s) as EPS

After selecting the menu item “Utilities->FontWizardXT EPS Export...” the following dialog is shown:

Save Page(s) as EPS...

With this dialog the destination and name of the resulting EPS file(s) is specified. There are additional options available:

- *Page(s):*

With FontWizardXT it is possible to save more than one page of a document as EPS-files with one command. The resulting EPS-files get unique names by adding the page number and an optional suffix to the file name, e.g. Document1_001.eps (see chapter 4.2 for details).

- *All:*

With “All” the page range is set to all pages of the current document.

- *Absolute page numbers:*

The page numbers of a document must not start with 1, but can start with any number the user wants to. By default FontWizardXT uses these “logical” numbers for specifying pages. With “Absolute page numbers” the page range is specified with absolute page number from 1 to n, with n the number of pages in the current document.

- *Offset:*

With absolute page numbers active it is possible to enter an offset here. This offset is added to the number at the end of the eps file name.

- *Selected items:*

If some boxed of the current document are selected, you can save only the bounding box of the selection as a EPS-file by activating “Selected items”.

- *Layoutname:*

If you want the base name of the eps file the layout name instead of the project name, check this option.

- *Export Style:*

With “Format” the desired export style can be selected. All QuarkXPress eps export styles are available from that menu. Styles can be added and modified via “Edit->Output Styles...”.

- *Options:*

With “Options” it is possible to add, delete and modify the EPS output styles of QuarkXPress. Please see chapter 4.2 for details.

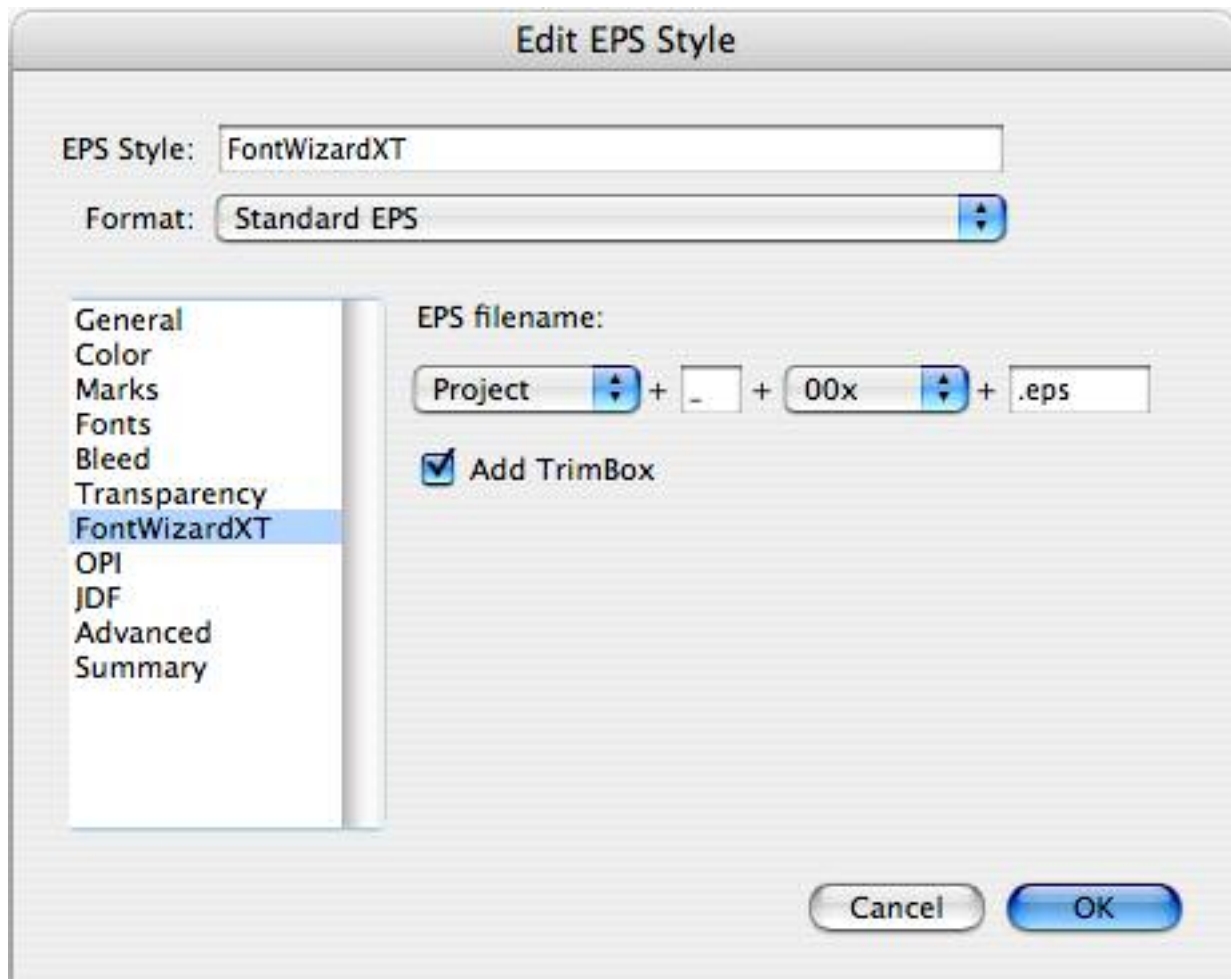

4.2 EPS Export styles:

FontWizardXT 5.0 is fully integrated into the new output styles scheme of QuarkXPress 7.0. From “Edit->Output Styles->EPS Output Styles” you get a dialog for creating, removing and editing eps output styles, which can be used later by the FontWizardXT EPS export dialog.

EPS Output Styles

After creating a new style with “New” or “Duplicate” and pressing “Edit” the following dialog comes up:

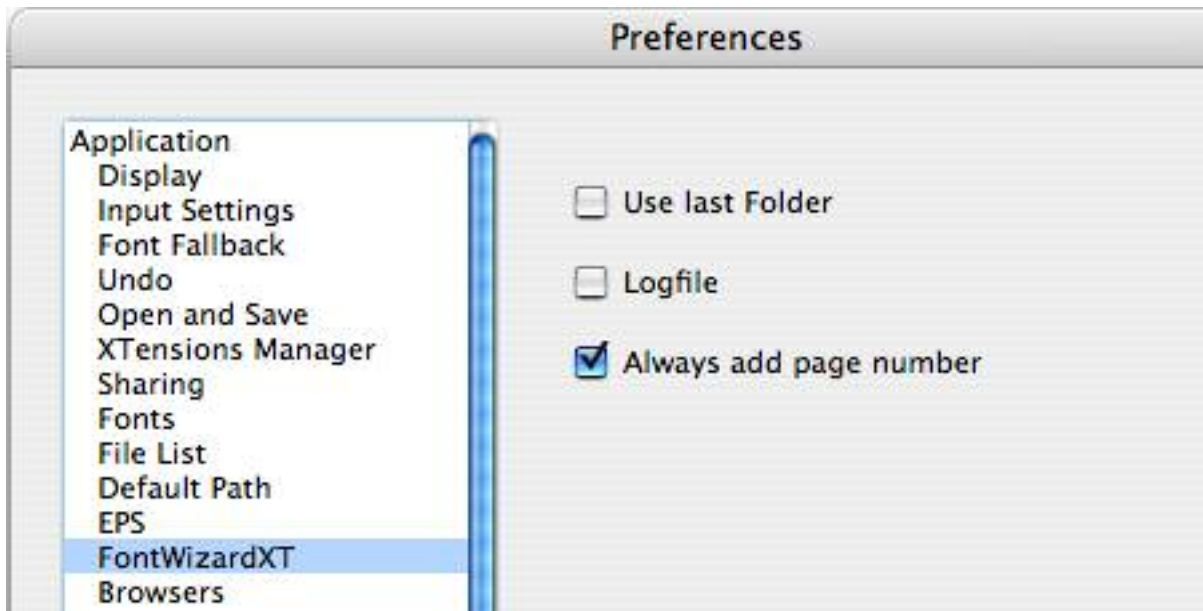

Edit EPS output style

With that dialog you can setup all the needed eps export settings, section for section. FontWizardXT adds a panel for specifying the naming options for that style. The eps filename is composed of the following components:

- Base name (Project or Layout)
- Separator string (can be empty)
- Number of digits for the page number (e.g. 00x gives 001, 002, ...)
- Suffix (can be empty)
- Add TrimBox (if creating PDF with Adobe Distiller)

4.3 Preferences

The general preferences of FontWizardXT can be set by choosing “QuarkXPress->Preferences->FontWizardXT...” or by “Utilities->FontWizardXT EPS Export...” with no document open:

Preferences

- *Use last folder:*

The custom eps export dialog of FontWizardXT navigates to the folder of the current document. If you want to use the same (last) folder each time, you have to check that option.

- *Logfile*

With this option active FontWizardXT creates a logfile for each export, located in the XTension folder and named “FontWizardXT.log”. This logfile can be very useful for debugging in case of missing fonts or other problems during eps export.

- *Always add page number*

With this option active FontWizardXT adds always a page number to the eps file name, even for single page documents. If you want no page number for single page documents, deactivate this option.
