1. Overview

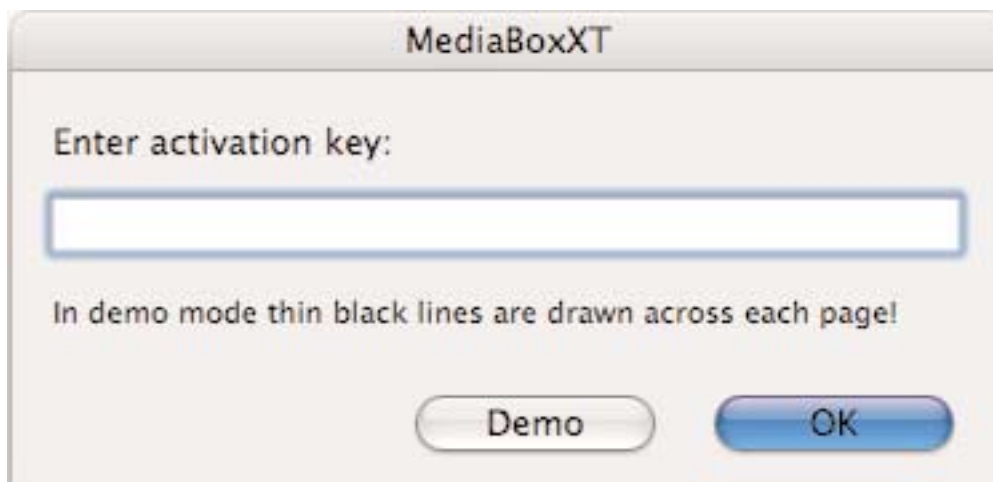

The MediaBoxXT is the perfect tool for creating PDF files with QuarkXPress™ and Acrobat Distiller. All necessary settings are done within one print style and can be activated with one click.

2. Requirements

- MacOS 10.4/10.5
- Windows 2000/XP
- QuarkXPress™ 7/8

3. Installation

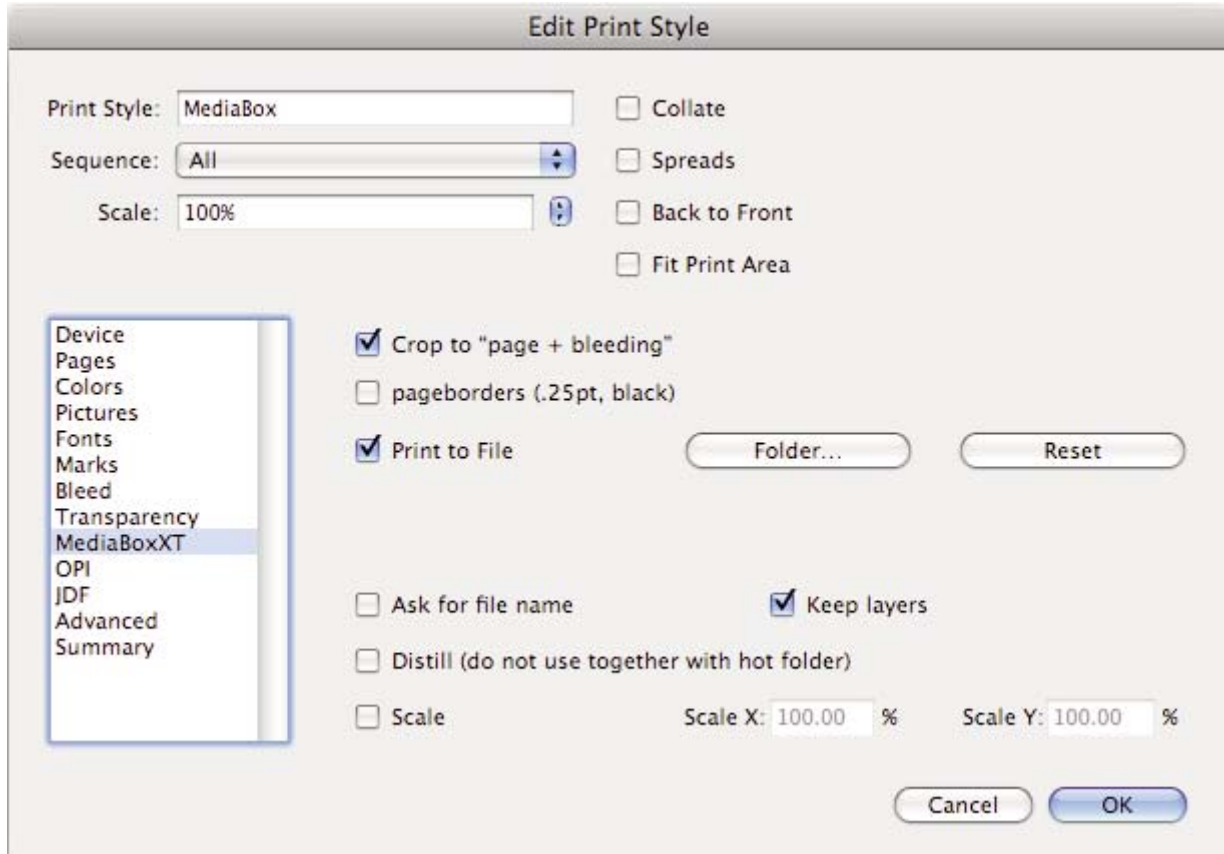

To install MediaBoxXT copy it into the XTensions-folder of QuarkXPress™. After restarting QuarkXPress™ the following dialog comes up:

Here you enter the activation key you got by email. In demo mode thin black lines are drawn across each page on printing.

4. User interface

With “Edit->Output Styles” it is possible to create and edit print styles.

- *Crop to “page + bleeding”*

Independent of the paper size the MediaBox crops the output to the correct size. So it is possible to use one large paper size for all document sizes you have. The final PDF contains all necessary PDF boxes like Trim- and CropBox for postprocessing like imposing.

- *Pageborders*

A thin black line (.25 pt, black) is drawn around the document page size (useful for proofing purposes).

- *Print to file*

The output is written to a Postscript file. If no folder is specified, the PostScript file is created within the document folder. The name of the file is the project name + suffix “.ps”:

- *Ask for file name*

With this option it is possible to change the PS file name.

- *Keep layers*

With this option the layers used in QuarkXPress are also available in the PDF document.

- *Distill*

With this option distilling is started automatically with the created PS file. Acrobat Distiller must already be started for that to work, the current settings are used. Please do not use together with Distiller hot folders!

- *Scale*

With this option it is possible to setup asymmetric scaling.
