## 1. Overview

TypoX adds a palette to QuarkXPress™ with feedback for important typographic parameter not visible normally: These parameters are the versal height of the current font and the x- and y-Position of the caret. The versal height can also be modified.

## 2. Requirements

- QuarkXPress™ 4.1 to 6.5
- MacOS 9.2
- MacOS X 10.3.9/10.4
- Windows 2000/XP

## 3. Installation

For installation you have to copy TypoX into the XTensions™-folder of QuarkXPress™ . After restarting QuarkXPress™ TypeX is ready to use.

## 4. User Interface

After successful installation and restart of QuarkXPress™ the following palette should be visible.

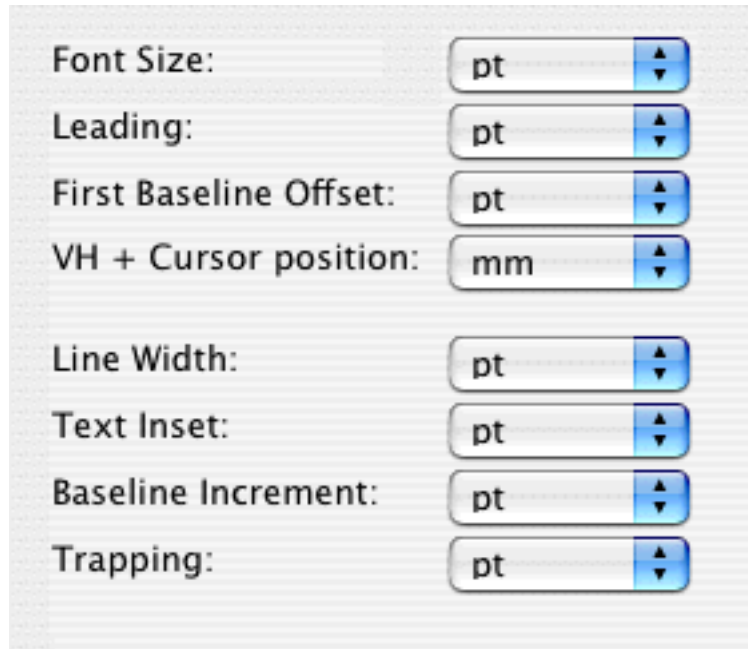

*Pic. 1: TypoX-Palette*

With a textbox the current box feedback is shown for the versal height (VH) of the current font and the x- and y-position of the caret. The versal height can be modified by the user. You can use any unit supported by QuarkXPress™ and you can process arithmetic calculations within the edit field.

The palette can be closed and reopened via the menu item “View->Show/Hide TypoX”. The position of the palette is saved by TypoX.

## 5. Preferences

With the menu item “Edit->Preferences->TypoX...” or “QuarkXPress->Preferences->TypeX...” it is possible to set the units for several typographic parameter only shown in pts normally.
